
More on TPAC1.2 trimming

Paul Dauncey

Trimmed sensors #29, #45, #46, #48

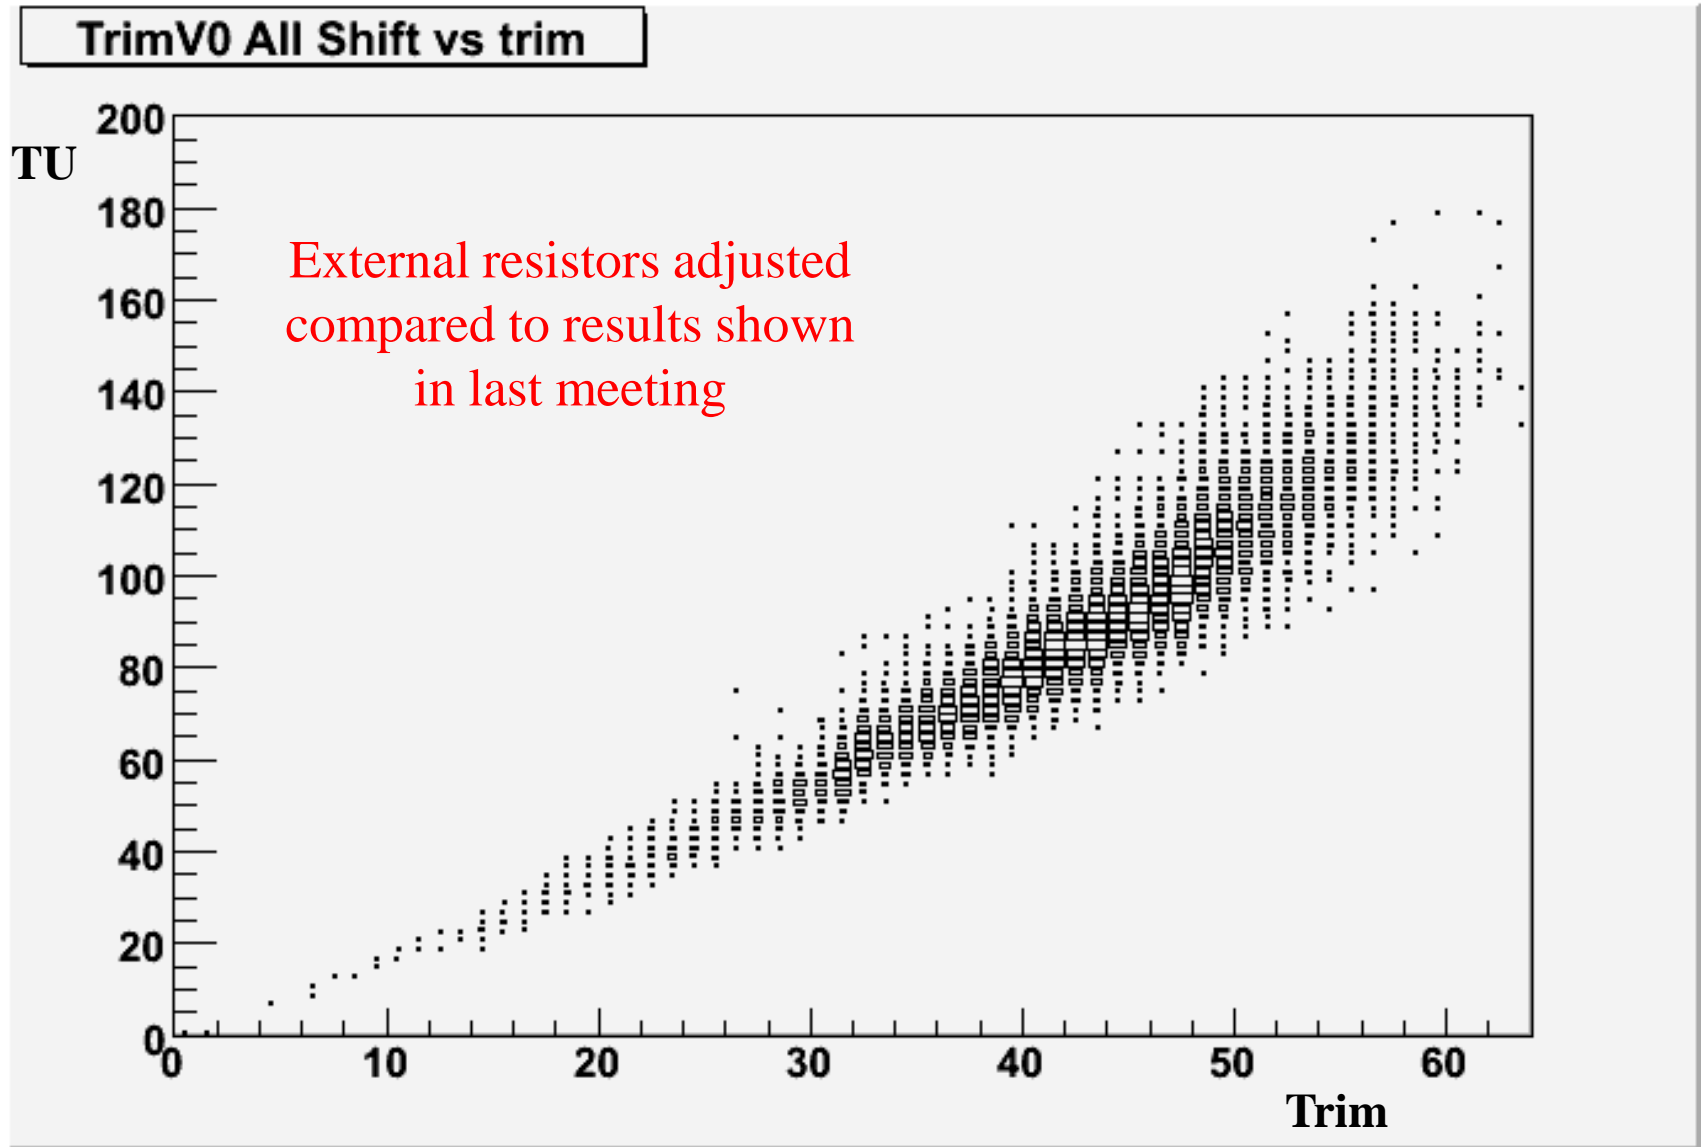

- Same method as before
 - Fix trims to some values
 - Unmask 42 pixels per readout region
 - 4 regions = 168 pixels total in each run
 - Do threshold scan to determine mean and width
 - Do 168 runs to cover complete sensor
- Adjust trim to narrow mean distribution
 - Picked target for pixel mean = 100TU for all sensors
 - Adjust trims using binary division of remaining range for each pixel
 - Needs six set of runs to fix all six bits
- Following completed trim, run with ~all pixels unmasked
 - Threshold scan similar to “real” running

Sensor #29 trim values

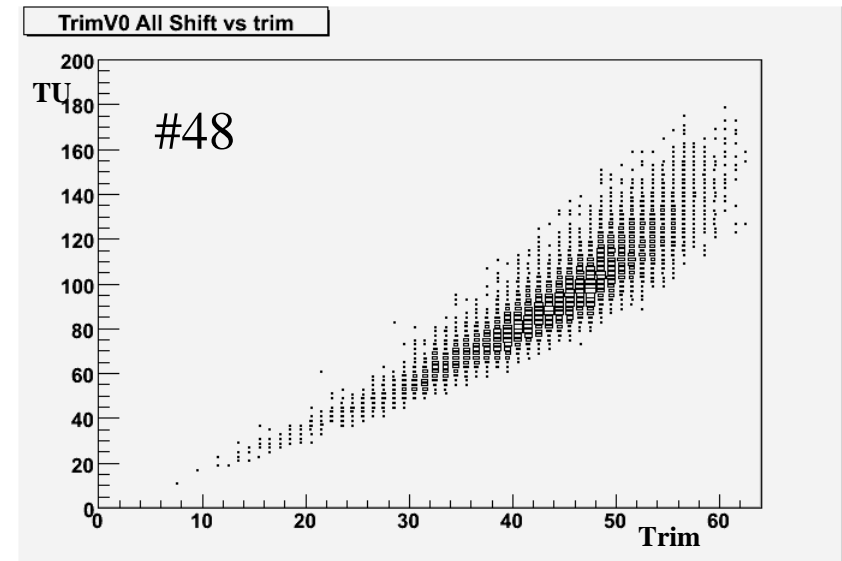

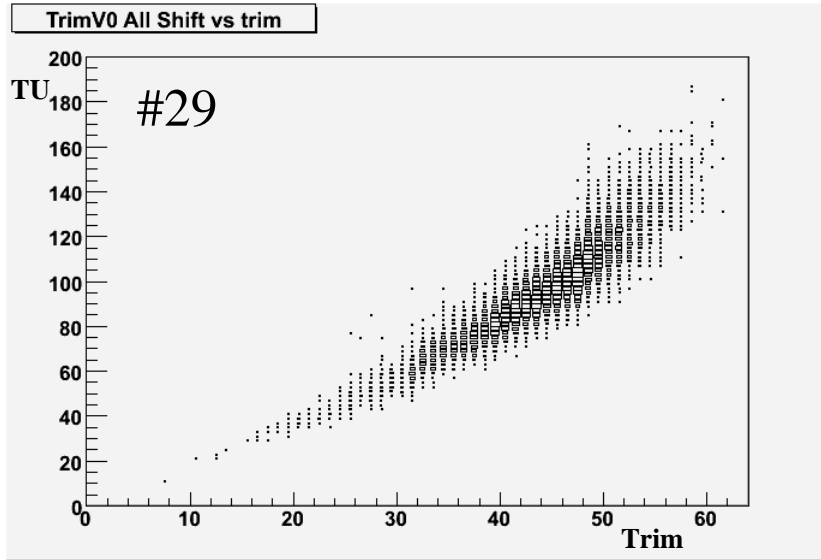

TrimV0 All Trims

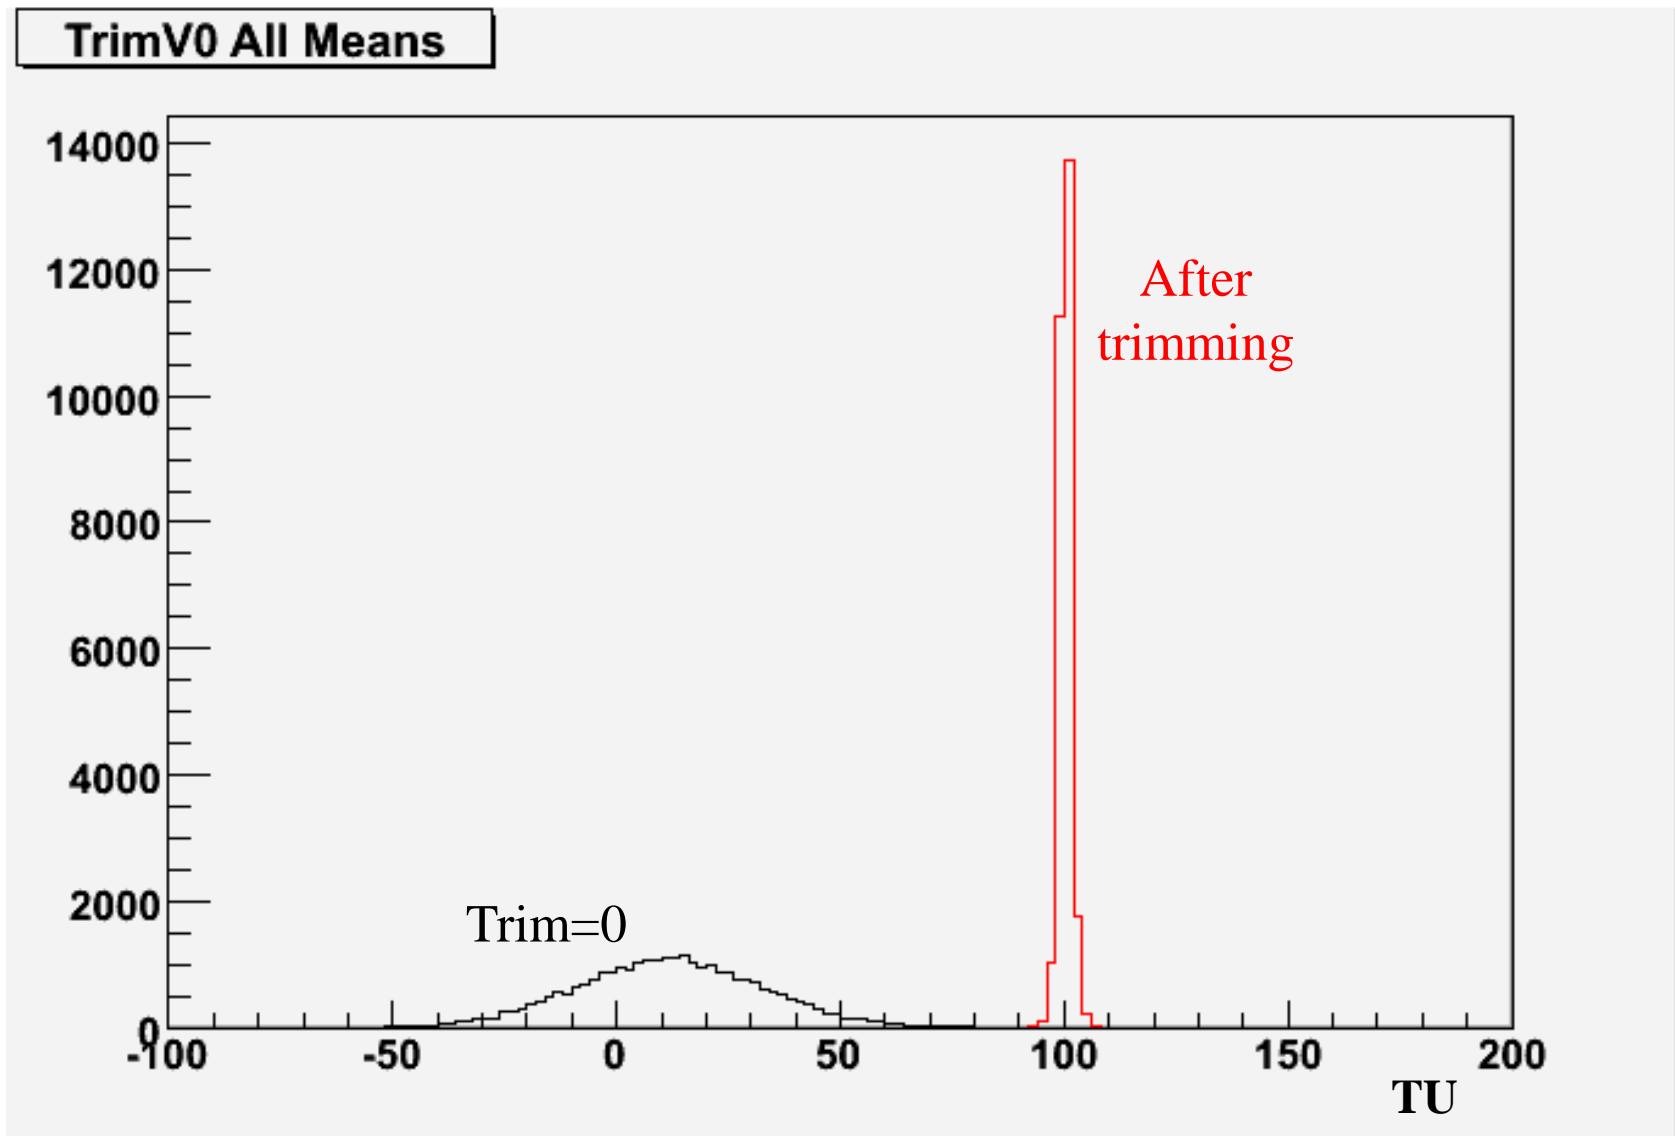

Sensor #29 shift relative to trim=0

Similar for all four sensors

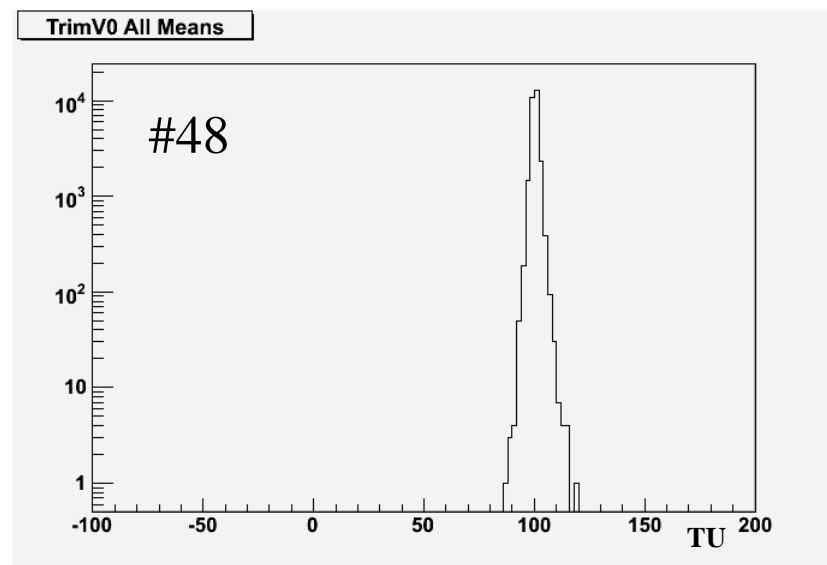

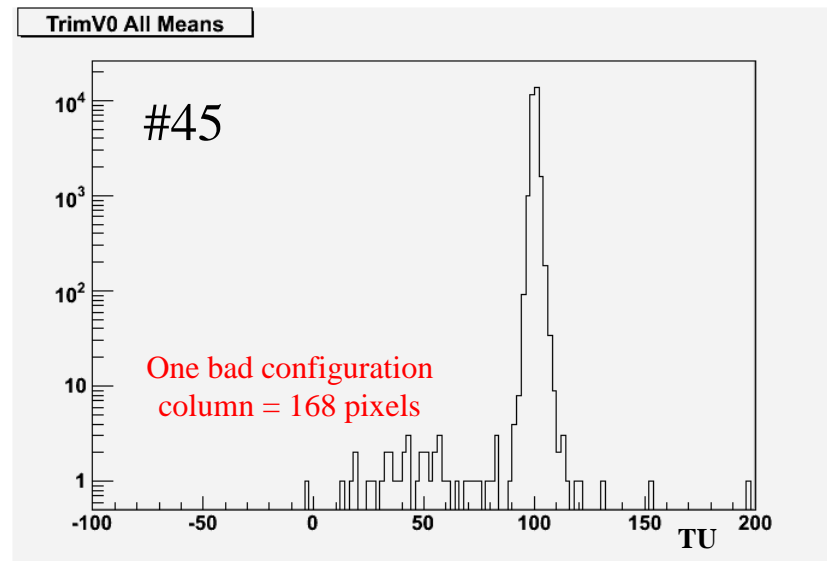

Sensor #29 effect of trimming on mean

Sensor #29 mean (cont)

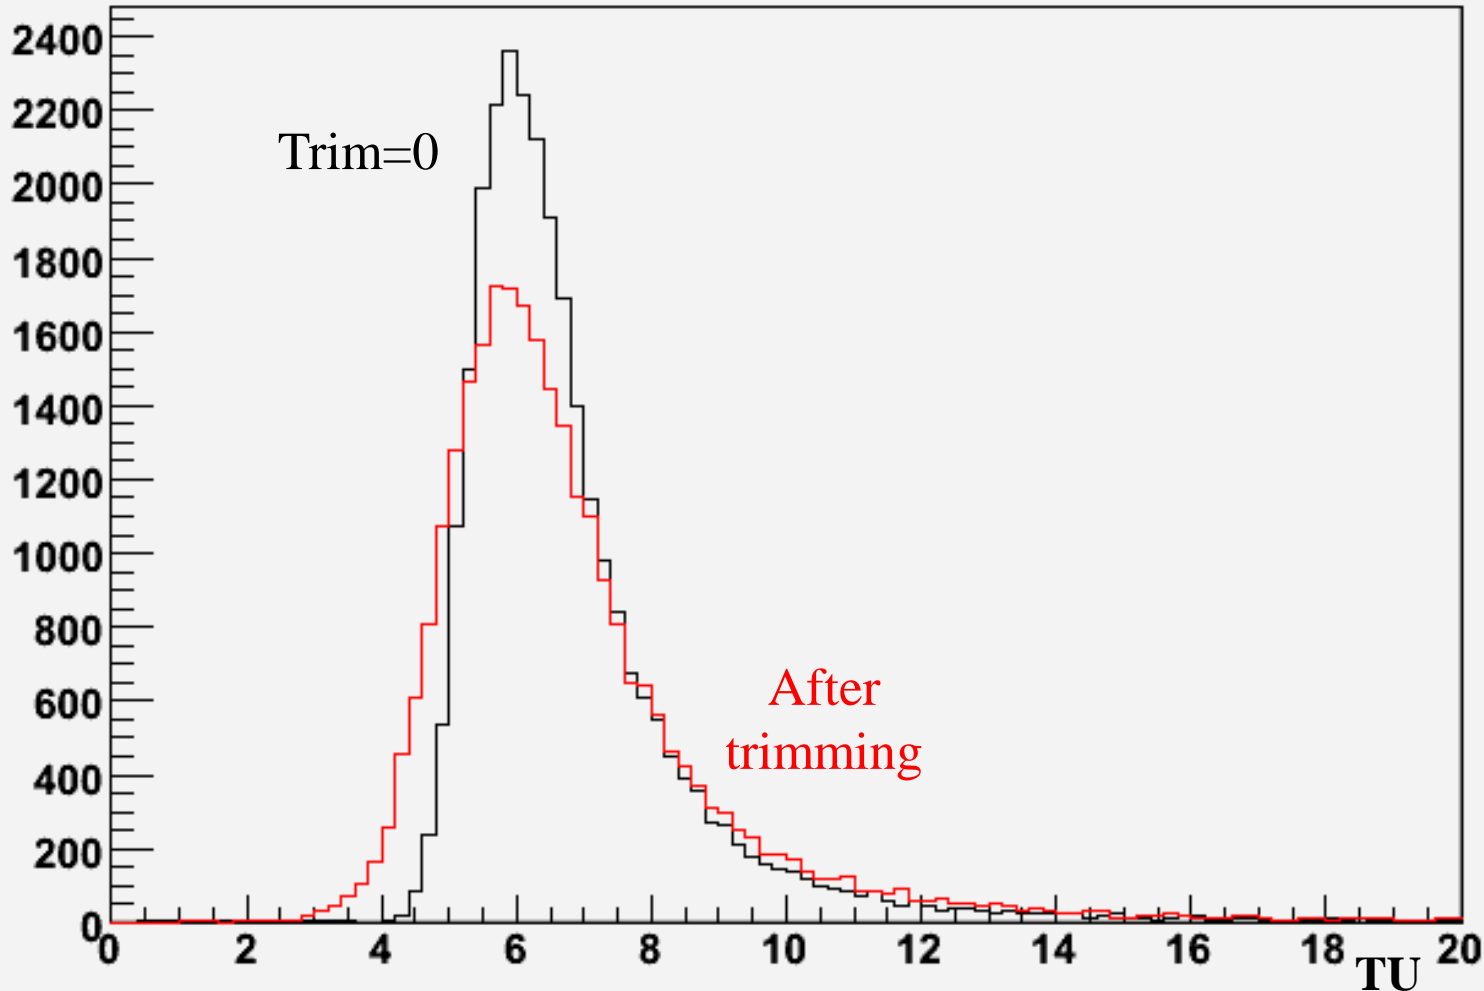

Similar for all four sensors

Sensor #29 effect of trimming on RMS

Trim0 All Sigmas

Similar for all four sensors

Trim0 All Sigmas

Trim0 All Sigmas

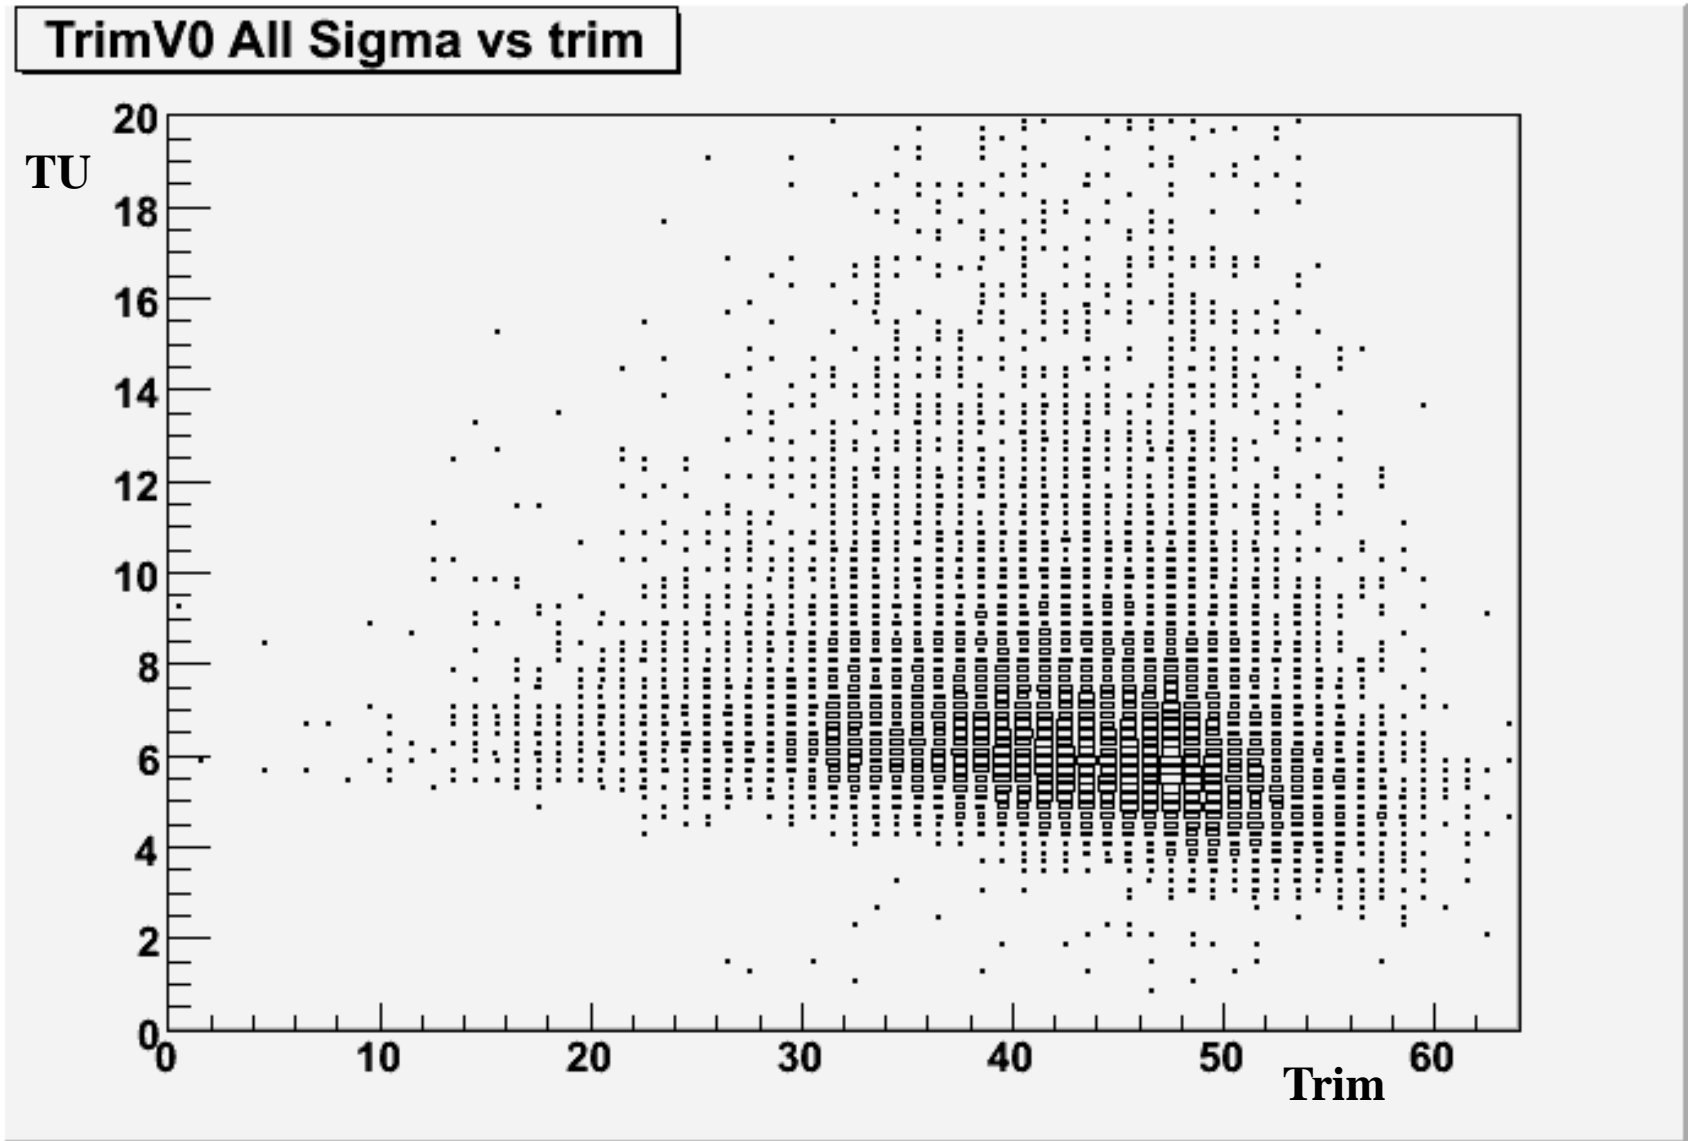

Trim0 All Sigmas

Trim0 All Sigmas

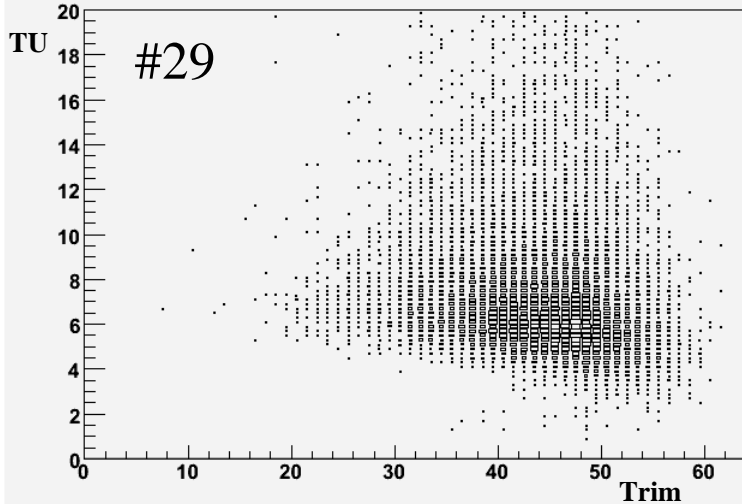

Sensor #29 dependence of RMS on trim

Similar for all four sensors

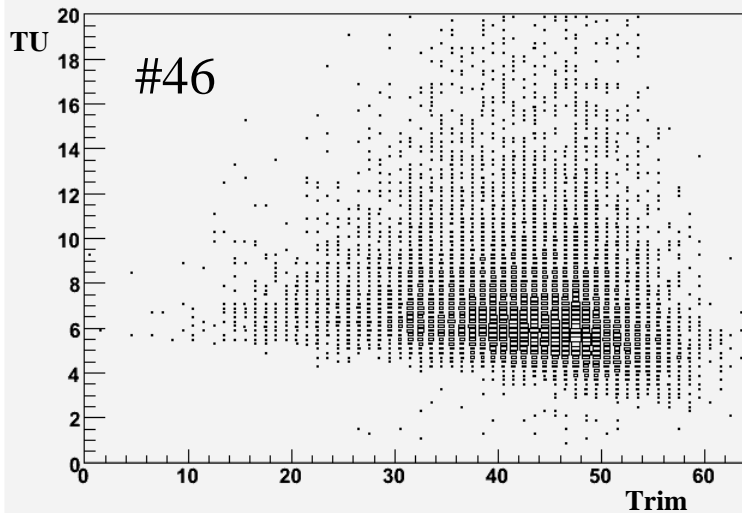

TrimV0 All Sigma vs trim

TrimV0 All Sigma vs trim

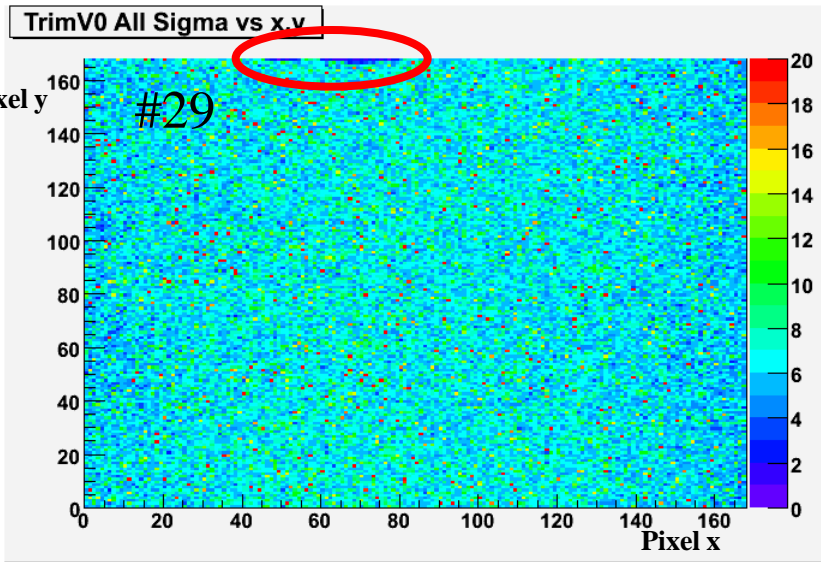

TrimV0 All Sigma vs trim

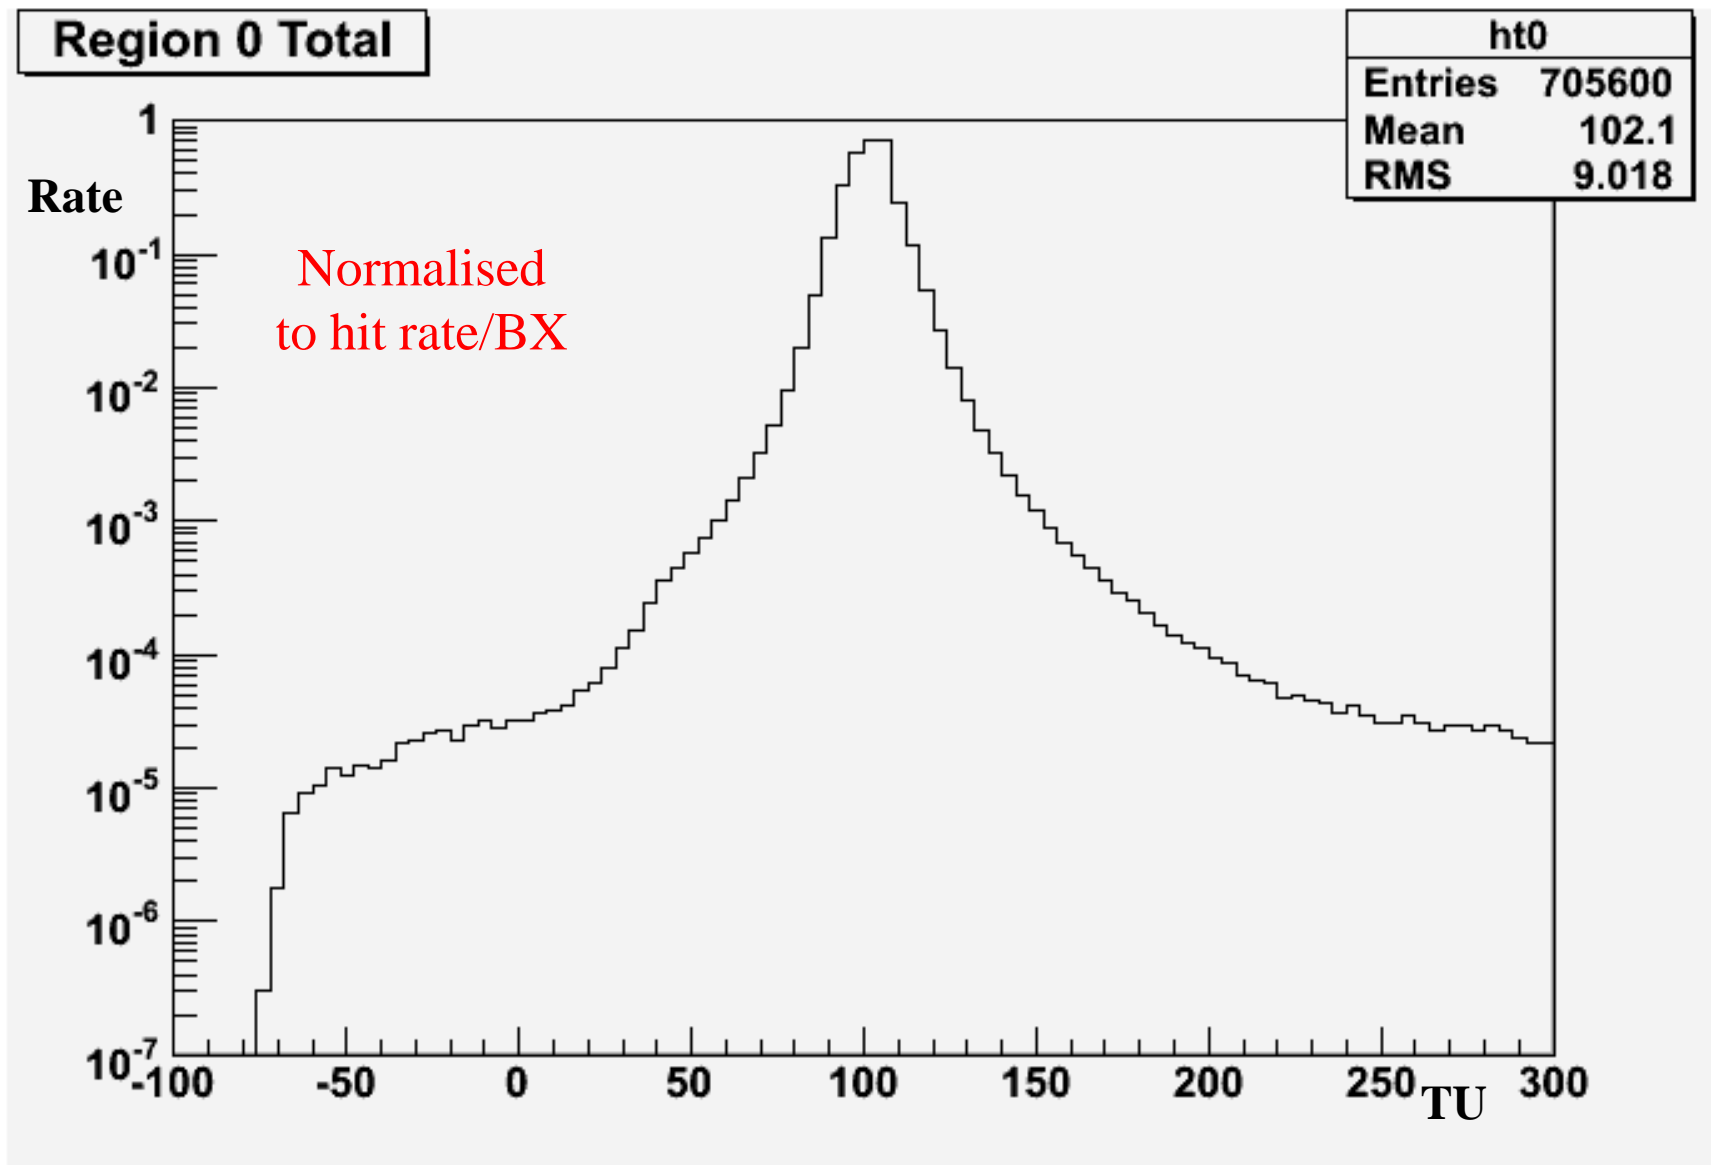

TrimV0 All Sigma vs trim

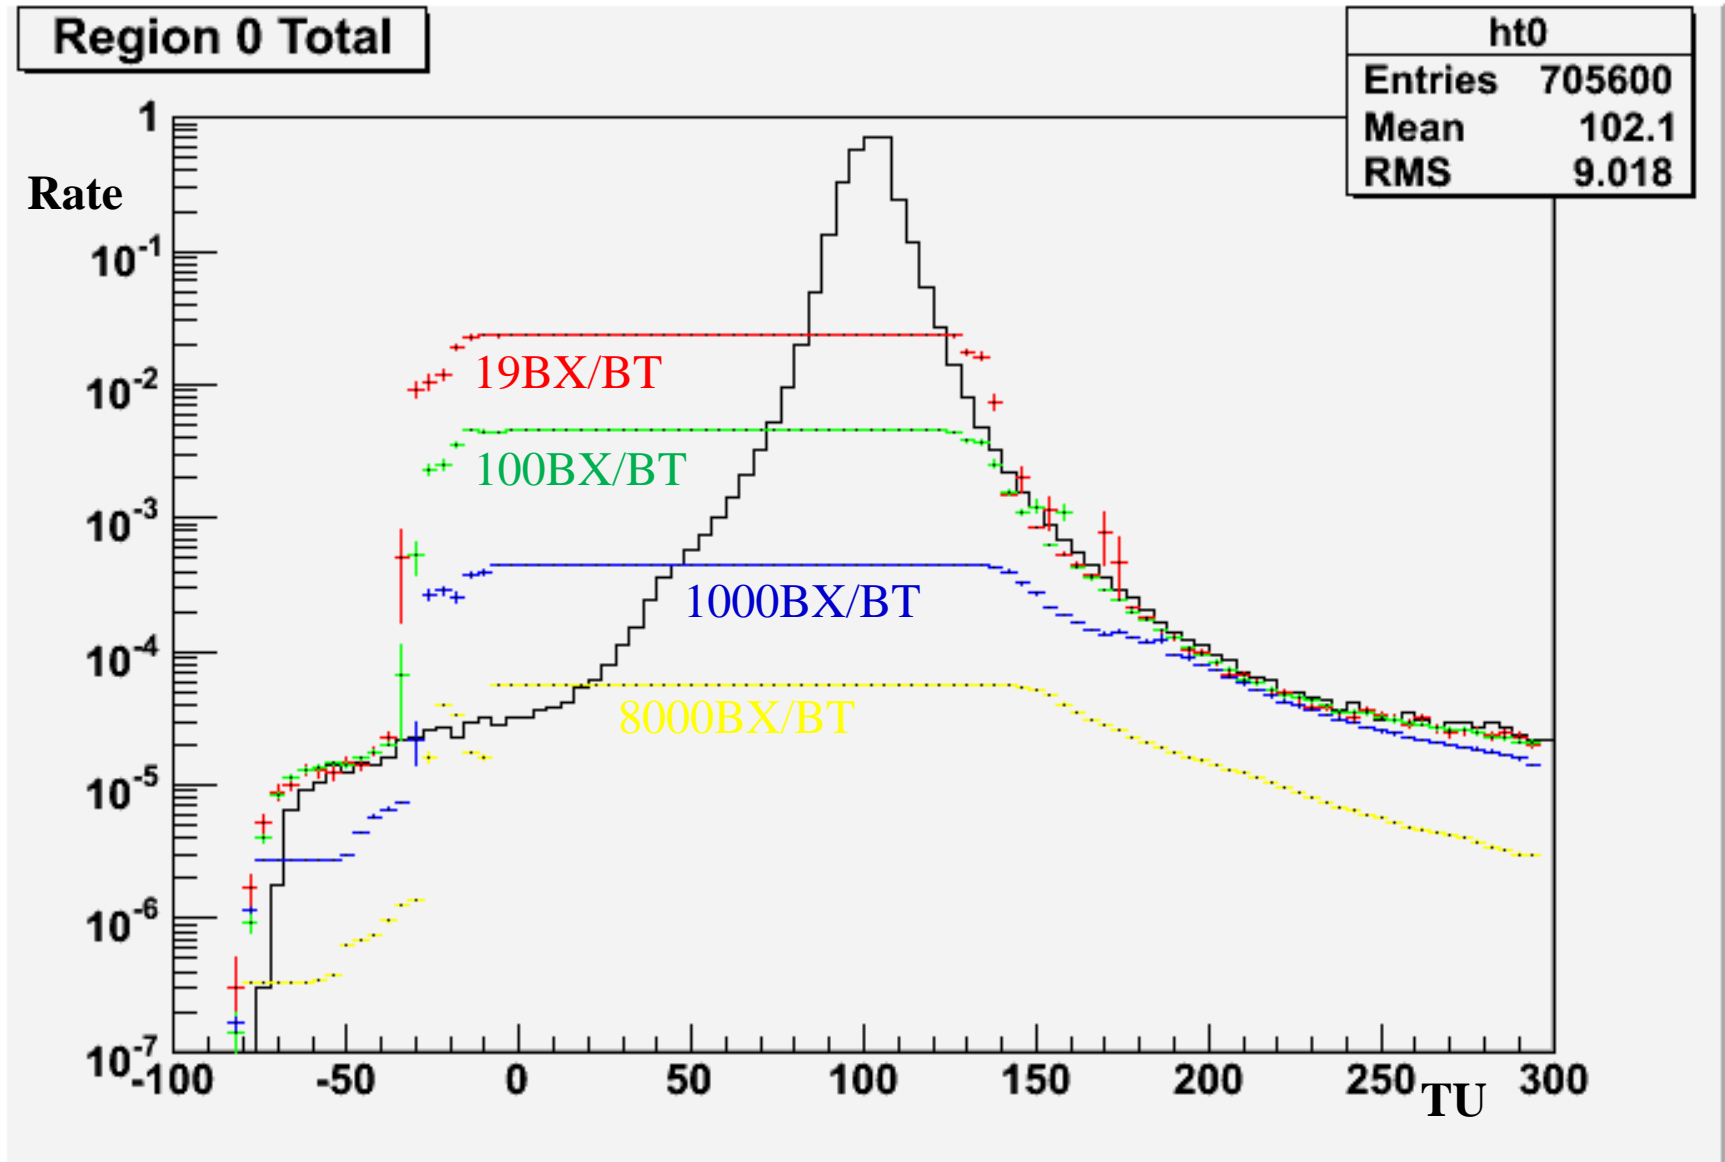

Position dependence of RMS

Sum of all region 0 hits from trim runs

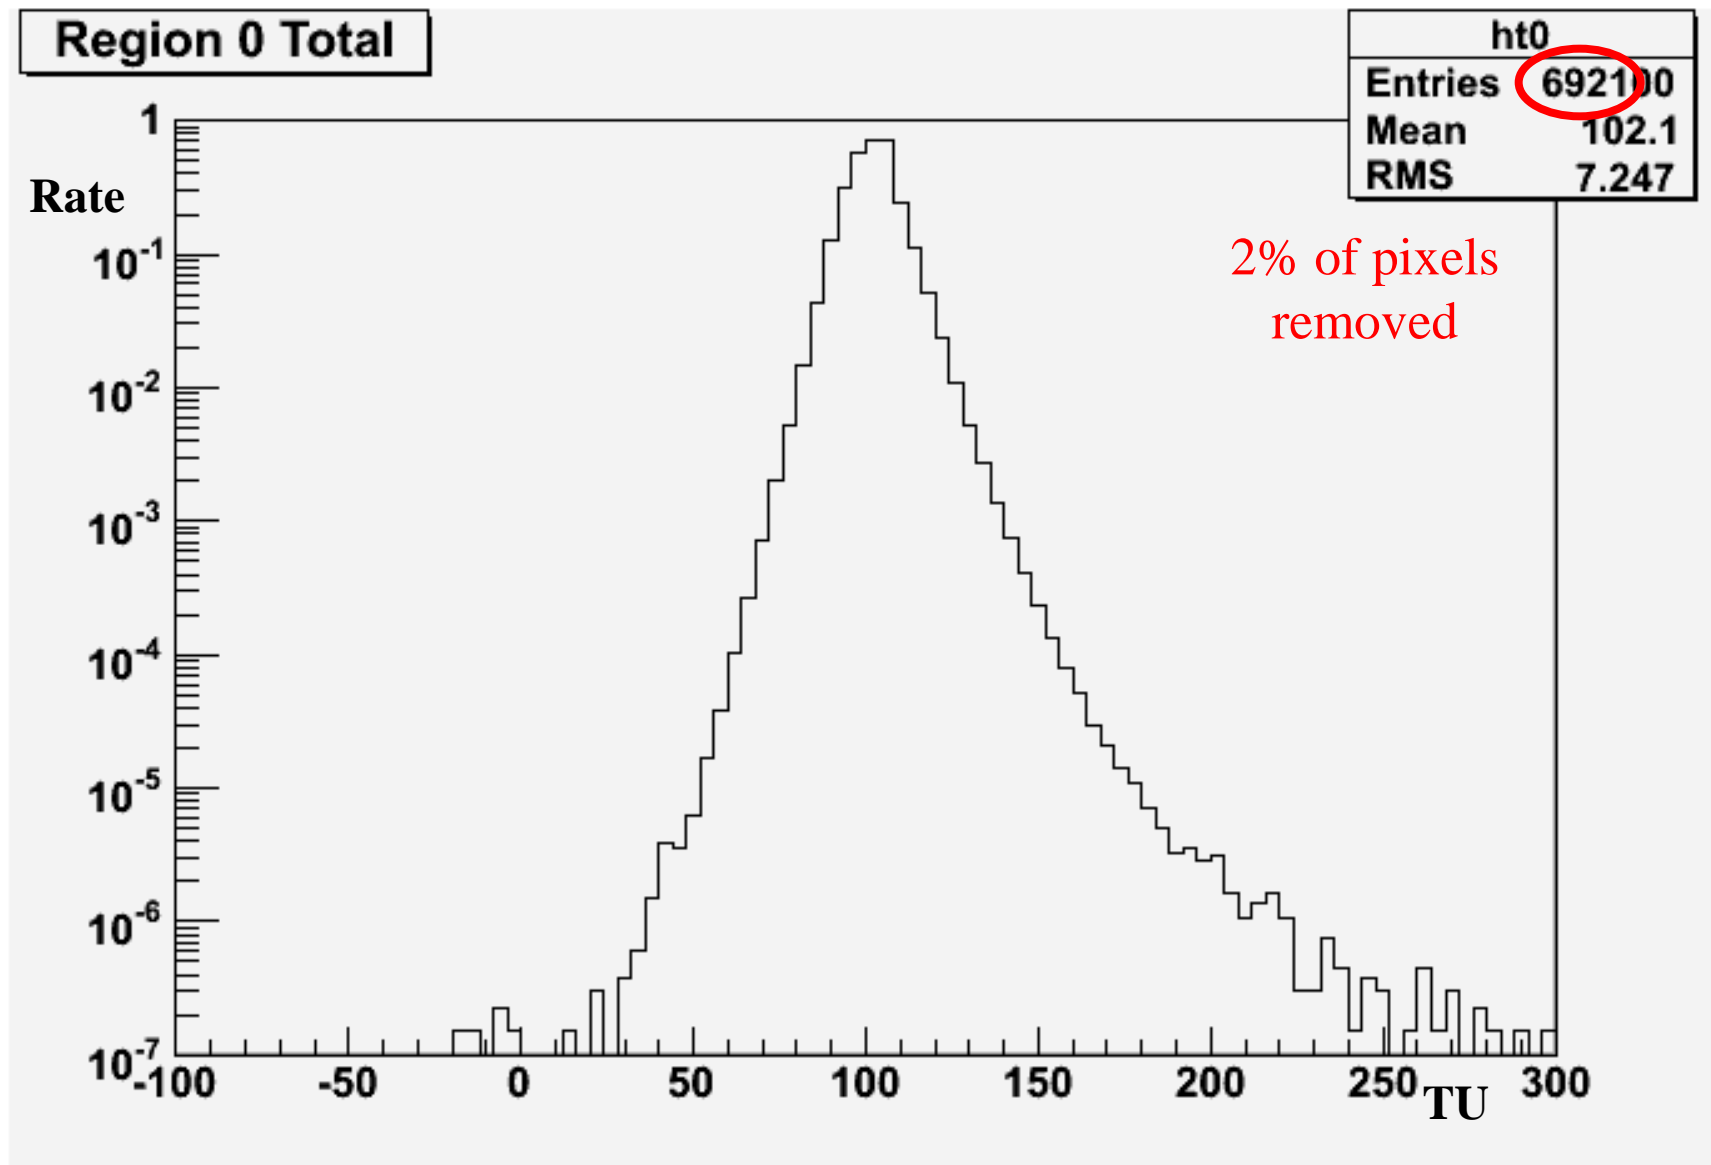

Rate from runs with all pixels unmasked

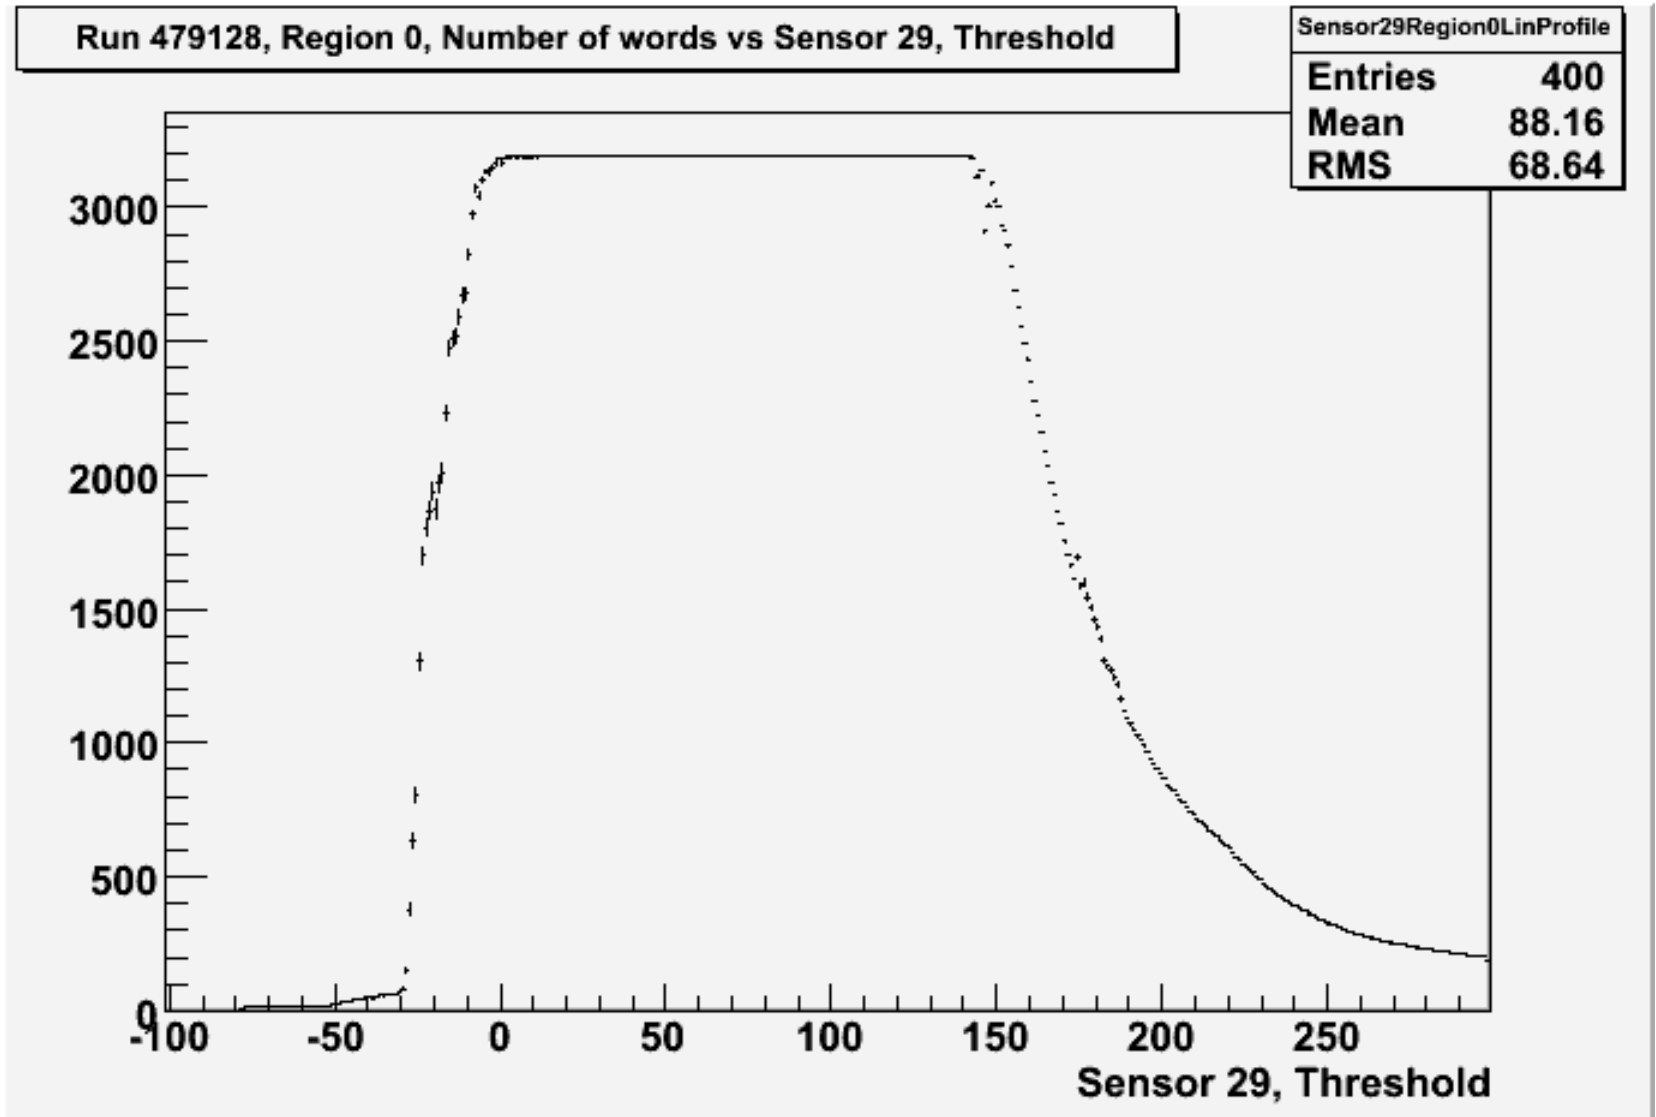

Sum of all hits again

Exclude pixels with $\text{RMS} > 15\text{TU}$

Unmasked runs for 8000BX/BT; mean

Unmasked runs for 8000BX/BT; scatter

Four regions not exactly the same

Not exactly reproducible

Run 479128, Region 0, Number of words vs Sensor 29, Threshold

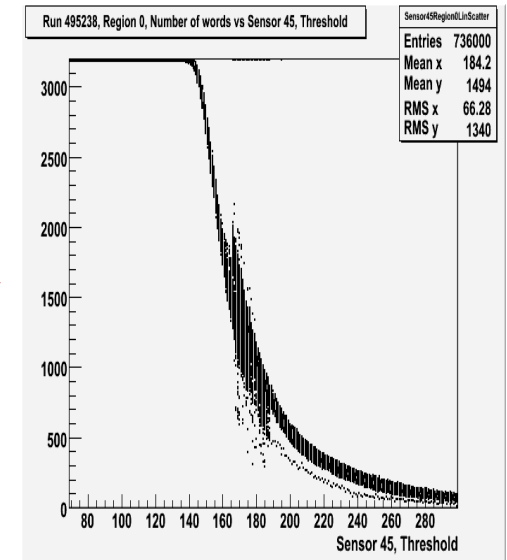

13/6/09

Run 479133, Region 0, Number of words vs Sensor 29, Threshold

25/6/09

The four sensors vary significantly

Run stopped
artificially

Conclusions

- For trimming, the sensors look very uniform
 - Same mean, noise distributions
 - Same response to trim
 - Very few dead pixels
- Will hit memory limit if running for 8000BX/BT
 - Only for a few of the most noisy pixels
 - Can reduce rate significantly by masking most noisy ~2% of pixels
- When running with all pixels unmasked, see instabilities
 - Not very reproducible for a given sensor
 - Different sensor to sensor
