
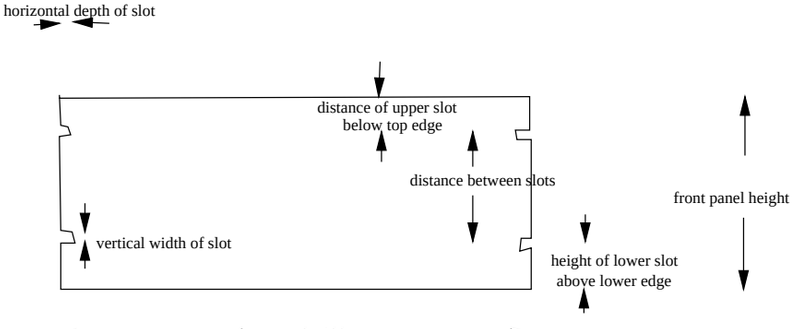
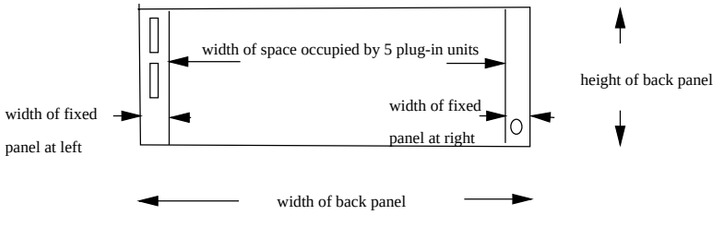
relay crate, general shape

back of relay crate



relay crate front panel



relay crate back panel

This is mostly filled by 5 plug-in units,
but there is a fixed part of the panel on the left
on which are fixed 50-way plugs for
ribbon cables.
Also on the right I think the mains connection
is through a cable which just goes through a
hole. I think this mains cable has a plug fixed on
to it, so there is no mains plug on the right
hand side fixed panel. Is this correct?
